Pratham Patankar

Full-Stack Developer

+91-9076006477| prathampatankar1234@gmail.com | LinkedIn | GitHub | Mumbai, India

Technical Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, Dart, SQL
Frontend Technologies: React.js, Next.js, Tailwind CSS, Flutter, Responsive Design
Backend & Database: Hono.js, Express.js, Prisma ORM, Bun, Node, PostgreSQL, MySQL, Firebase, Supabase
Cloud & DevOps: Docker, AWS, Vercel, Linux, Git, GitHub Actions
Developer Tools: Git, GitHub, Postman, VS Code, Chrome DevTools, Figma
Areas of Expertise: Full-Stack Development, UI/UX Design, REST API Development, Database Design

Education

Anna Leela College September 2022 – June 2025
Master of Science in Information Technology *CGPI: 7.21*

Siddharth College September 2019 – April 2022
Bachelor of Science in Information Technology *CGPI: 8.52*

Professional Experience

Frontend Developer & UI/UX Designer March 2024 – Present
Naayatrade *Mumbai, India*

- Developed a responsive B2B marketplace platform with dynamic buyer/seller dashboards, real-time order management, and secure payment workflows using React.js and Node.js.
- Built AI-powered internal sales automation tool that reduced manual processing time by 50%, integrating dynamic storefronts, product catalog management, and inventory control systems
- Translated 80+ high-fidelity Figma designs into production-ready, mobile-first landing pages for B2B SaaS platforms, achieving 95%+ design accuracy and 40% improved page load speeds
- Created Node.js scripts for Excel-to-database conversion and frontend JavaScript tools enabling admins to auto-populate product upload forms, while integrating 50+ internal and third-party APIs

Key Projects

Base Address from Pincode API – Address Resolution Service | *Hono.js, Bun, REST API* *Live* | *GitHub*

- Built REST API that generates complete base addresses from Indian pincodes, automatically providing city, state, and area details for seamless checkout integration
- Reduced address entry time by 80% in checkout flows - users only input pincode, building number, and room details while API fetches remaining location data
- Designed for e-commerce integration where checkout providers receive complete address details while users experience minimal data entry friction

Made in Vikhroli – Digital Marketplace | *Next.js, Supabase, Docker* *Live* | *GitHub*

- Built full-stack digital marketplace using Next.js and Supabase (PostgreSQL + Auth) with seller dashboards, product management, and self-hosted Docker deployment
- Developed custom UPI-QR payment system from scratch without third-party processors, integrating PIN-based validation and email-based order fulfillment
- Optimized user purchase flow through UX research achieving 50% reduction in checkout time via single-click purchasing and streamlined validation
- Designed minimalist interface with strategic micro-interactions, reducing cognitive load and improving conversion rates

Calc2Pay – Business Payment Calculator | *React.js, Tailwind CSS* *Live* | *GitHub*

- Built privacy-focused calculator with instant UPI QR generation for small merchants, combining bill calculation and payment in single workflow
- Architected zero-server privacy model using localStorage with client-side QR generation, eliminating manual entry errors and ensuring complete data sovereignty
- Ensured regulatory compliance using static QR codes instead of UPI deep links, providing sustainable solution across all UPI apps
